DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Gersho et al (6475245).

As per claims 1,6,9, Gersho et al (6475245) teaches an apparatus and method:

“determining frequency.....amplitude information” as sinusoidal based encoders including frequency information (col. 4 lines 16-20, lines 60-64)

“characterized.....parameters” as phase synchronization information into the transition and voiced coder (Fig. 4a, subblocks 30 and 32),

As per claim 2, Gersho et al (6475245) teaches:

“phase jitter.....track” as initialized phase information (col. 15 lines 34-37; and tracked via equation 12),

As per claim 3, Gersho et al (6475245) teaches:

“phase jitter.....frequencies” as generating phase information by calculating a difference between the transition frame and test frame (col. 15 lines 33-40).

As per claim 4, Gersho et al (6475245) teaches:

“determining.....said difference” as deriving the lag via a correlation calculation between current phase and initial phase (col. 15 lines 35-59),

As per claims 5,7, Gersho et al (6475245) teaches:

“receiving....component” as receiving the sinusoidal information (fig. 5, subblocks 104,106, and 108)

“restoring....parameters” as LP synthesis reconstructed speech (fig. 5, subblock 120)

“characterized in that.....jitter parameter” as receiving the phase sync parameter (Fig. 5, subblock 1222 + col. 16 lines 45-65) .

Art Unit: 2655

As per claims 8,11, Gersho et al (6475245) teaches a audio coder as speech compression and transmission (so that the speech can be re-generated or 're-played' at the decoder end -- col. 3 lines 50-67) .

As per claim 10, Gersho et al (6475245) teaches storing the signal (col. 3 lines 60-61).
